ABOUT ME

Software Engineer passionate about building scalable web applications and solving real-world problems through technology. Experienced in developing full-stack applications using modern frameworks and databases, with a strong foundation in software design, debugging, and problem-solving. Continuously exploring emerging technologies, including AI-powered applications and integrations, to build smarter and more efficient solutions. In my professional experience, I support enterprise applications, troubleshoot production issues, and collaborate across teams in agile environments, which has strengthened my analytical thinking, adaptability, and ability to quickly learn new technologies.

PROJECTS

Personal Portfolio Application | Flask, React, PostgreSQL

- Designed and developed a full-stack personal finance and portfolio management platform using React, Flask, and PostgreSQL.
- Implemented JWT-based authentication and authorization to secure user access, with Flask REST APIs and SQLAlchemy used to handle application data and business logic.
- Designed relational database schemas with indexing and pagination to improve query performance as the application's transaction data grows.
- Containerized the frontend, backend, and PostgreSQL database using Docker and Docker Compose, with isolated networking, persistent volumes, and environment-specific configuration.
- Built automated backend tests using Pytest with a separate PostgreSQL test database to verify API behavior, authentication, validation, business rules, and database operations.
- Used Git for version control with a branch and pull request workflow, and set up GitHub Actions CI to validate backend code and React production builds on code changes and pull requests.
- Deployed the application using Vercel, Render, and Supabase PostgreSQL.

AI-Powered Pharmaceutical QMS | React, FastAPI, LangGraph, Groq LLM

- Designed and developed an AI-assisted pharmaceutical Quality Management System (QMS) to automate customer complaint processing by extracting structured complaint data from unstructured text and PDF documents, reducing manual data entry and improving review efficiency.
- Built the application using React, Redux Toolkit, Material UI, FastAPI, and PostgreSQL, with REST APIs for complaint processing and storing complaint records in the database.
- Used LangGraph with Groq's Llama 3.3 70B model to extract complaint details from text and PDF files, and automatically generate severity, priority, and initial risk assessments.
- Developed an AI Copilot that lets users update complaint details using natural language, while keeping the rest of the complaint data unchanged.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, SQL, C++
Frontend: ReactJS, Redux Toolkit, HTML, CSS, Material UI
Backend & APIs: Flask, FastAPI, SQLAlchemy, Flask-Migrate, REST APIs, JWT Authentication
Databases: PostgreSQL, SQLite, Oracle SQL
Testing: Pytest, Postman
DevOps & Version Control: Git, GitHub Actions, Docker, Docker Compose
Cloud & Deployment: Vercel, Render, Supabase
AI: LangGraph, Groq
Enterprise Applications: PeopleSoft, Workday FIN/PSA, Salesforce, Oracle APEX

CERTIFICATIONS/COURSES

Oracle APEX Cloud Developer Certified Professional — Jan 2025
Introduction to Data Analytics — Nov 2025

EXPERIENCE

Hitachi Digital Services
Jan 2024 - May 2026
Application Support & Developer — *Bangalore, India*

- Built an internal web tool using Oracle APEX and PL/SQL to track and debug application errors.
- Supported Peoplesoft and Workday FIN/PSA modules handling time, expense, and billing workflows.
- Analyzed production issues using SQL queries and tested fixes to maintain reliability.
- Collaborated with cross-functional teams during releases and enhancements.

INTERNSHIP

Hitachi Vantara
Feb 2023 - Dec 2023
Intern — *Bangalore, India*

- Configured Salesforce features such as flows, validations, approval processes, reports, and dashboards for business needs.
- Developed Apex triggers and unit tests to automate backend business logic.
- Built small internal applications and learned end-to-end web application development using Oracle APEX.

EDUCATION

RNSIT
Aug 2019 - May 2023
B.E - Information Science and Engineering - CGPA 8.56

Sri Kumaran Children's Home Composite PU College
Aug 2017 - Apr 2019
PUC - PCMCs - 92%

Dayananda Sagar International School
Jun 2004 - Mar 2017
ICSE - 92%
